

variable: excellent design, large

through a small selection of display and

• Only fonts that I personally consider

- Collection of > 2,000 open-source fonts

deductive frontside included

character sets, larger number of styles

under the SIL Open Font License (OFL)

• Most fonts in this collection are licensed

- Focuses mainly on fonts for longer texts,

- Some fonts are licensed under the

Apache2 or ULL

<http://twarcch.github.io/tw/>

Most fonts in this collection are licensed under the [SIL Open Font License \(OFL\)](#).

Some fonts are licensed under the [Apache 2](#) or [UFL](#).

The `src` folder contains scripts that are used to build the collection. These scripts for Mac OS X download the most recent versions of the fonts from various sources, preferably the authors' Github repos or websites, and only in some cases from secondary sources. This collection is not updated automatically, but I plan to update it from time to time.

Download collection

- [totw-fonts.zip](#) (98.5 MB, 795 fonts)
- [totw-fonts-noto.zip](#) (92.6 MB, 1,138 fonts)
